

IN THE SPECIFICATION

Please amend the paragraph at page 3, line 21 to page 4, line 3, as follows:

Another method of manufacturing double eyelid forming tape according to the present invention comprises the steps of applying an adhesive on one of both of the surfaces of a given length of resiliently elastic sheet member, attaching release sheet formed with a notched groove generally at the center of the length thereof on both surfaces or one of the surfaces of the ~~[[seat]]~~ sheet member applied with the adhesive, and cutting the same widthwise into narrow strips.

Please amend the paragraph at page 19, line 17 to page 20, line 5, as follows:

The method of manufacturing the double eyelid forming string 30 comprises the steps of providing a V-shaped notched grooves 33 at the center of the sheet 32 of a given length formed of a film applied with silicon processing or of silicon paper, applying an adhesive on a plurality of resiliently elastic string members 31 cut into more or less the same length as the sheet 32, placing the plurality of string members 31 applied with an adhesive in parallel on the surface of the sheet 32 to be adhered, placing another sheet 32 thereon and joining a pair of sheets with each other, whereby adhering the string member applied with the adhesive in parallel on the ~~[[seat]]~~ sheet 32 having a notched groove, and cutting the sheet 32 adhered with the plurality of string members along the string members into narrow strings.
